

PRESS RELEASE

**THE RAD AS/400 Development Tool
Advanced Client Easycom/400**

Jean Coutu Group Inc. chooses ACE/400 & Delphi to develop client server applications for the AS/400.

Montreal, Canada Dec 28—The Jean Coutu group has selected ACE/400, Advanced Client Easycom, to redevelop and deploy its pharmacy client server applications. Gilles Gauthier, MIS project leader for application development said, "With ACE/400 and Delphi, we give our developers a tool that simplifies integrating the AS/400 platform in our corporate solution. We are excited about the possibilities that ACE/400 opens for our application development effort. It helps position us at the leading edge of technology, with a powerful solution, a seamless integration, and a dedicated team at MIS Systems."

Advanced Client Easycom/400 Product Specification

ACE/400 is a tool used to develop Client Server Applications for the AS/400 using Delphi or Visual Basic. By minimizing the necessary program coding, and providing native access to all AS/400 objects, from data files to communicating with pre-existing CL, RPG, or Cobol programs over any communication protocol including TCP/IP. ACE/400 makes the promise of record level access and rapid application development a lightning reality. As the latest upgrade for Light Lib/400, ACE400 is promising to deliver a high quality product with a satisfied customer base.

The Jean Coutu group is a major pharmaceutical distribution and retail chain company that operates sites cross Canada and the USA.

MIS Systems was founded in 1993. It develops, sales, and supports information systems solutions for the AS/400 Community; and has a strong network of end user sites worldwide. MIS Systems is headquartered in Nashville, TN.
